

HALA JABBAN

COMPUTER ENGINEER

PROFESSIONAL SUMMARY

Computer Engineering student with hands-on experience in backend and full-stack software development using **C#, ASP.NET Core, SQL Server, Java, Python, and JavaScript**. Built RESTful APIs, database-driven systems, and interactive dashboards through academic and practical projects, including logistics management and user-based note tracking platforms. Strong foundation in **object-oriented programming, database design, and data structures**, with experience developing desktop applications, web interfaces, and embedded systems solutions. Motivated to apply technical skills in real-world environments and grow as a backend-focused software engineer.

WEBSITES, PORTFOLIOS, PROFILES

- Github: <https://github.com/halajabbanER>

SKILLS

- Programming Languages: Java, Python, C, C++, JavaScript, C#
- Frameworks & Libraries: ASP.NET Core, Java Swing, Pygame
- Core Concepts: Object-Oriented Programming (OOP), Data
- Embedded Systems: Arduino / Microcontroller-based Systems
- Soft Skills: Problem Solving, Teamwork, Analytical Thinking
- Web Technologies: HTML, CSS, Bootstrap
- Databases: MySQL, Microsoft SQL Server
- Structures & Algorithms, RESTful APIs, Database Design
- Tools: GitHub, Swagger, Microsoft Office

EXPERIENCE

JUNIOR BACKEND /JUNIOR SOFTWARE ENGINEER INTERN 08/2025 to 10/2025

Pal4it, Istanbul, Turkey

- Developed backend applications using **C#, ASP.NET Core MVC, SQL Server, and Entity Framework Core (Code First)**.
- Built RESTful controllers with full **CRUD operations**, validation, migrations, and relational database design (1-N, N-N).
- Applied **Object-Oriented Programming** and implemented **Repository Pattern, Unit of Work, and Dependency Injection**.
- Used **LINQ** for advanced querying and optimized data access.
- Implemented authentication and **role-based authorization** (ASP.NET Identity – Admin/User) with DTOs.
- Developed MVC applications with Controllers, Views, Tag Helpers, Routing, and server-side validation.

- Designed database schemas using **Fluent API & Data Annotations** and contributed to an **e-commerce dashboard** (products, orders, users).

EDUCATION

Fatih Sultan Mehmet Vakıf University, Istanbul, Turkey
Bachelor's Degree, Computer Engineering, Expected in 07/2027
• Focus: Backend Development, Database Systems, Software Engineering

HIGHLIGHT PROJECTS

- Logistics and Note Tracking System Nov 2025 - Dec 2025**
- Built a logistics and personal note tracking system using **C#, ASP.NET Core, EF Core, and SQL Server** with RESTful APIs and role-based authentication.
 - Implemented shipment management, courier routing, and user-based note CRUD with dashboard statistics.
 - Developed responsive frontend using **HTML, CSS, Bootstrap, and JavaScript**, with API documentation via Swagger.
- Java Developer – Maze Game (2023)**
- Developed a maze-based puzzle game using **Java** and **Object-Oriented Programming** principles.
 - Implemented grid-based movement logic with obstacles and limited actions.
 - Designed modular architecture with custom classes for game engine, player, and environment.
- Java Swing – Library Management System (2024)**
- Built a desktop library management application using **Java Swing** and **MySQL**.
 - Implemented book browsing, borrowing, and purchasing workflows.
 - Integrated database operations for persistent data storage and retrieval.
- C Developer – Employee Management System (2024)**
- Developed a command-line employee management system using **C**.
 - Implemented CRUD operations including add, update, and search functionalities.
- Data Structures – Treasure Hunt Adventure Game (2025)**
- Designed an adventure game utilizing **linked lists** and **binary trees**.
 - Applied data structures for player progress tracking and score ranking.
- Python Developer – Ping Pong Game (2025)**
- Developed an interactive Ping Pong game using **Python** and **Pygame**.
 - Implemented keyboard-controlled gameplay and real-time collision mechanics.
- Embedded Systems – Smart Parking System (2025)**
- Built a smart parking system using a **microcontroller (Arduino / STM)** and proximity sensors.
 - Implemented real-time parking availability detection and status display.
